| 7.  | Western Visayas (Region VI)     | 102          |
| 8.  | Zamboanga Peninsula (Region IX) | 101          |
| 9.  | Ilocos Region (Region I)        | 61           |
| 10. | Bicol Region (Region X)         | 50           |

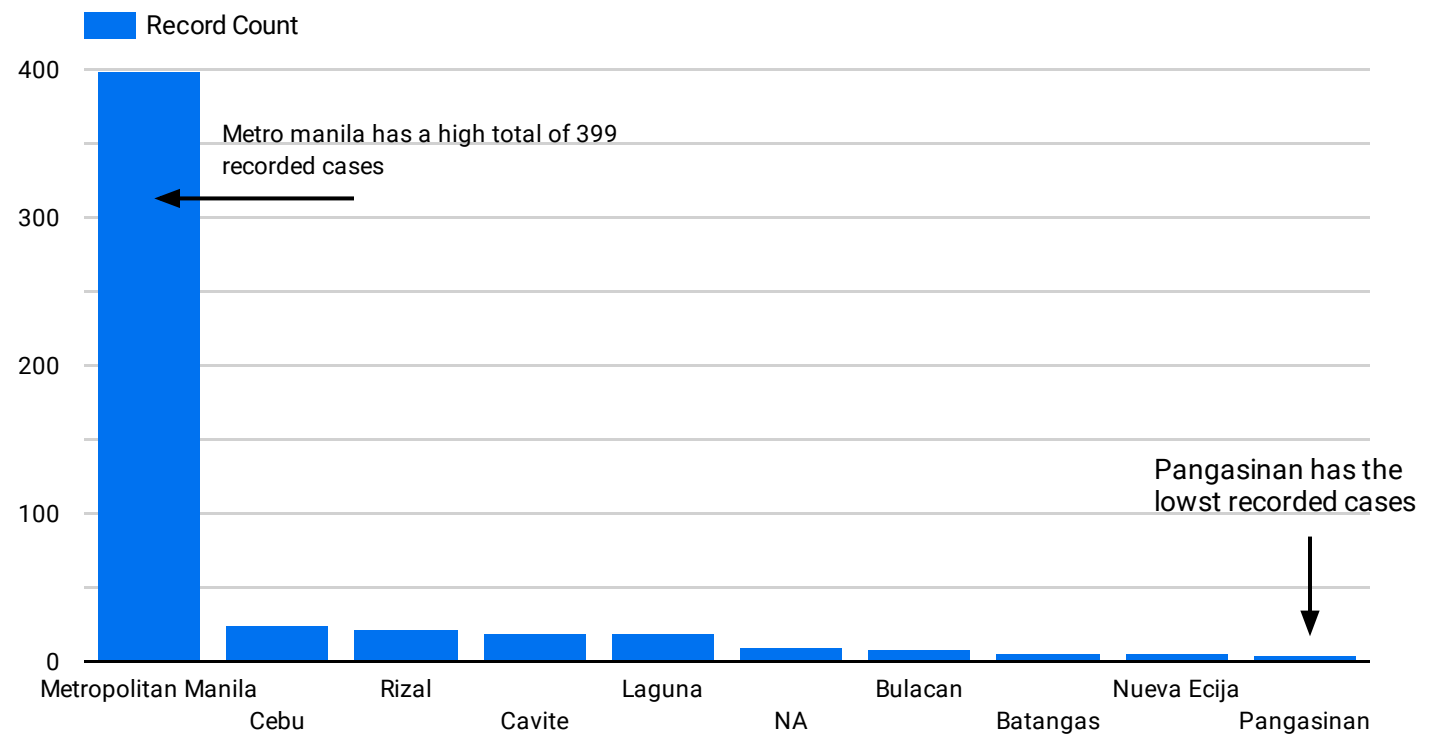

Record Count 3 • 6,873

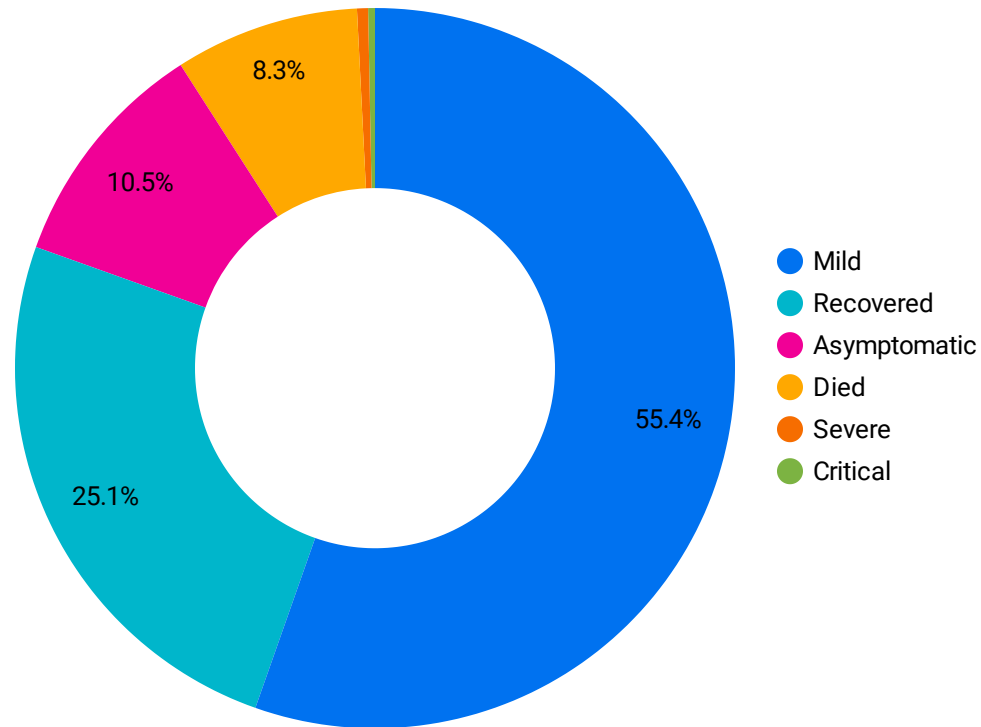

March 6, 2020 was the first  
Covid-19 cases in the

Philippines with **2**  
recorded cases

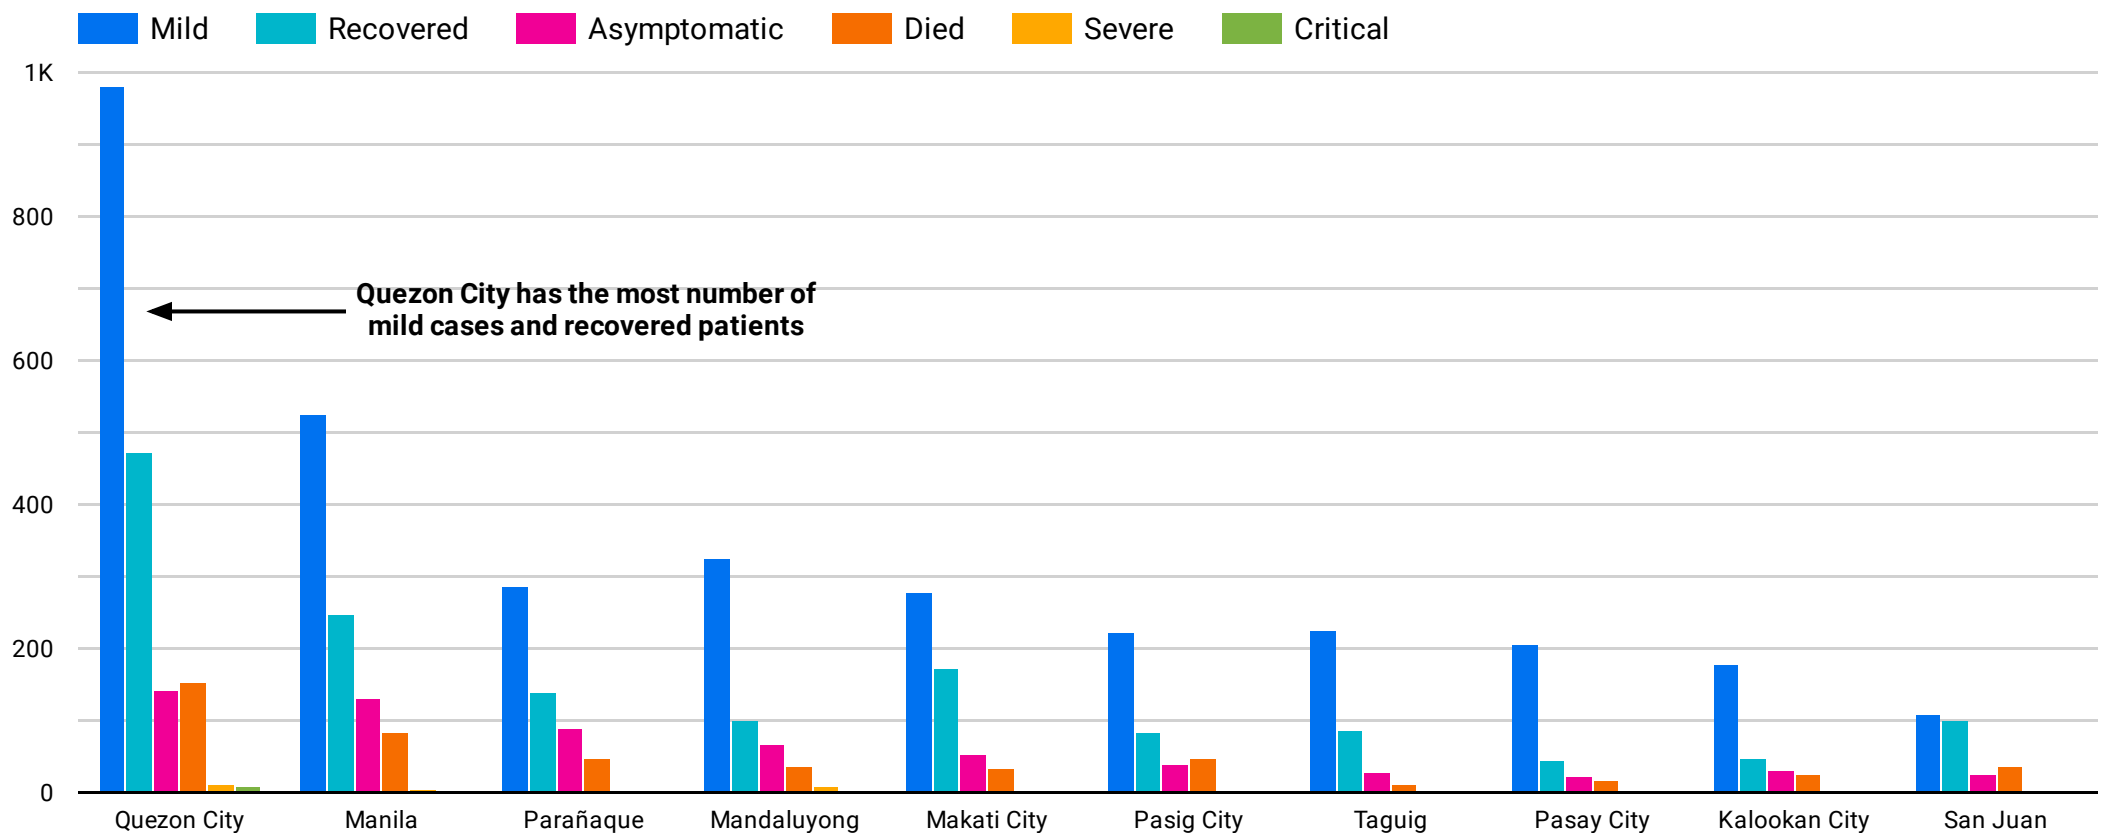

A total number of  
**538** Covid-19 cases  
peak at March 31, 2020 in  
Metro Manila

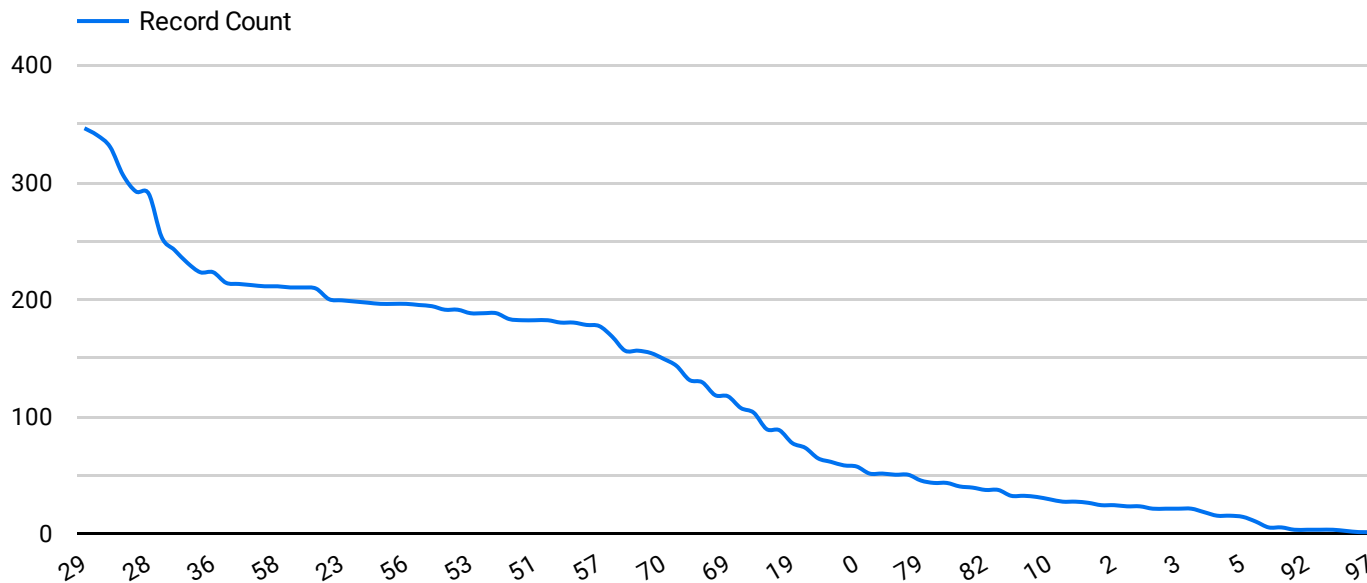

We have a total record of  
**12,091**  
in the Covid-19 dataset that  
has been recorded from  
February to May 2020

We then break this down into  
only Metro Manila patients

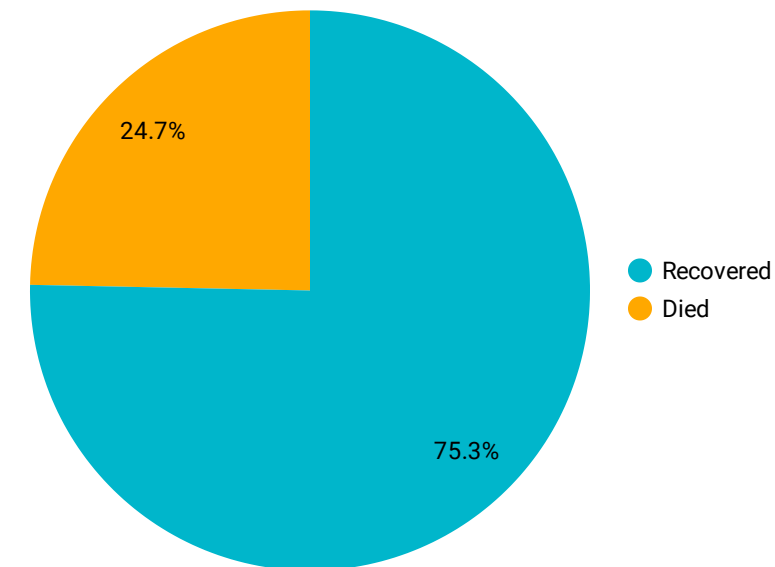

People in their  
early 30's up to  
early 40's  
reported to  
have **COVID**

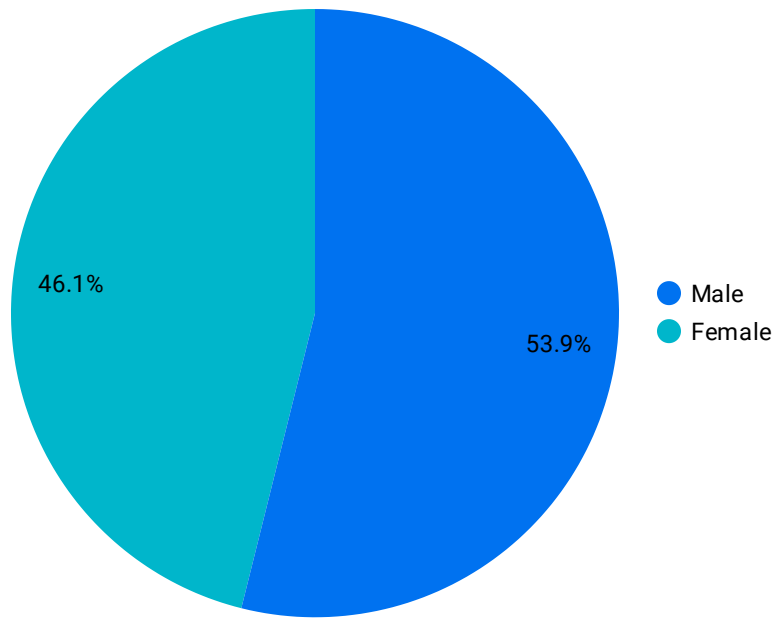

| case_id      | age | status        | region           | sex    | Record Co... |
|--------------|-----|---------------|------------------|--------|--------------|
| 1... C838528 | 32  | Home quara... | Metropolitan ... | Female | 1            |
| 2... C462688 | 44  | Died          | Central Visay... | Male   | 1            |
| 3... C387710 | 60  | Recovered     | Central Visay... | Female | 1            |

| 8... C202135 | 58  | Recovered     | Metropolitan ... | Male   | 1            |
| 9... C440075 | 33  | Recovered     | Metropolitan ... | Male   | 1            |

1 - 100 / 12091

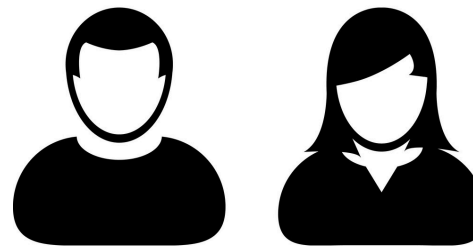

Despite having different health  
statuses, most of them died  
regardless of it

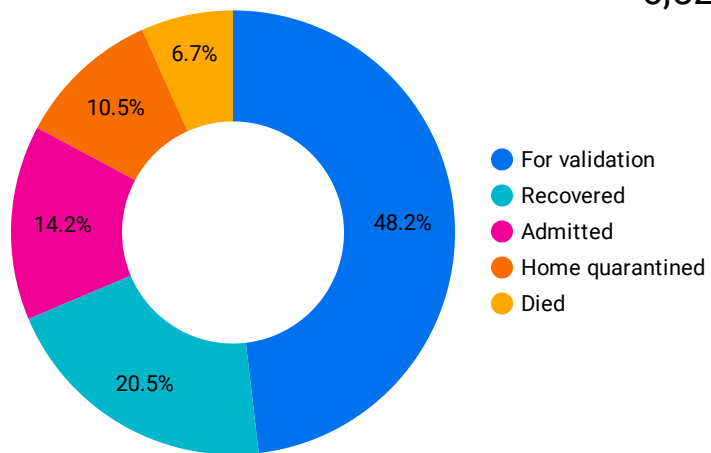

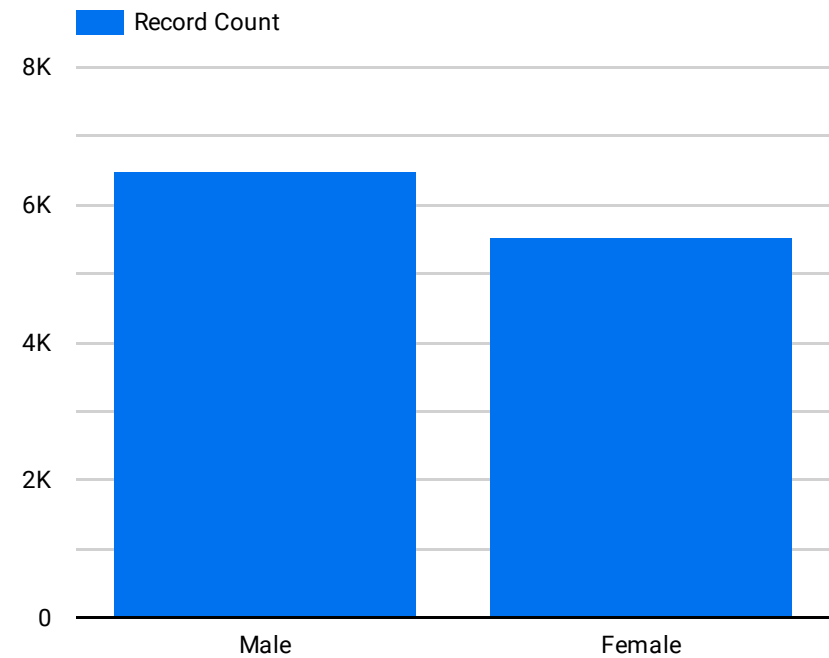

Distribution of the population who died from **COVID** based on male and female

6,521 died

5,570 died

The number of people who died from covid-19 is large. However, there are still a lot of number of people recovered from the virus

Getting affected by COVID or simply COVID does not choose any specific person regardless of sex, age, and where you live because you are still vulnerable to COVID.
